

Partnering with Transit Agencies and Governments to Build the Future of Mobility

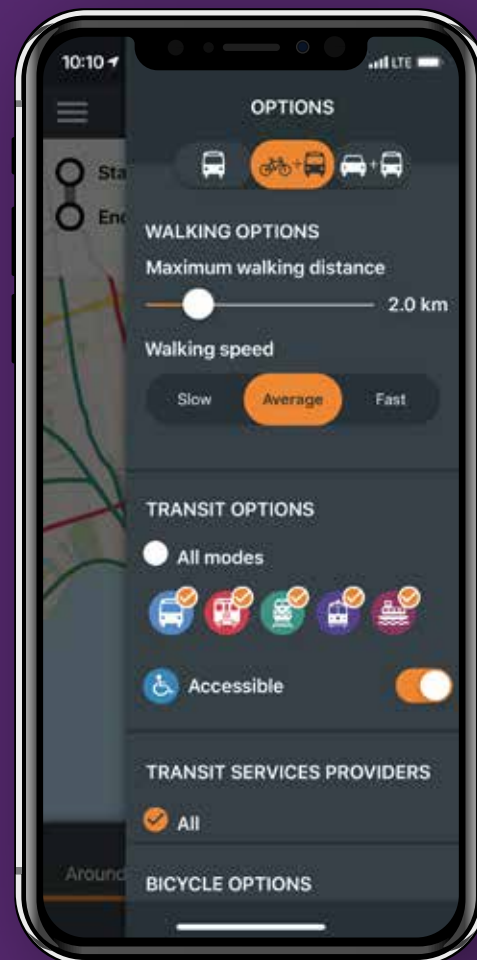

MOBILITY AT YOUR SERVICE

Connect passengers between bus, train, bike, and beyond.

Cityway, a Transdev company, specializes in helping transit agencies seamlessly integrate all available mobility options for passengers. Passengers are empowered by real-time and predictive data to choose the best intermodal options—and pay via a single unified app.

A partner to over 500 transit agencies and governments, we help build strong foundations for their mobility (MaaS) strategy. We help them shape the future of mobility, while ensuring ownership and control of the data.

INFORMATION

Integrated, real-time mobility information including predictive data for the public, in equitable and accessible ways.

BOOKING

Multimodal booking services for on-demand, first- and last-mile mobility solutions integrated with demand responsive transit, microtransit, transit integrated ride sharing services, paratransit, and autonomous vehicles, for a better passenger experience.

PAYMENT

Create integrated ticketing with account-based services to pay quickly and conveniently across all available modes. Passengers can receive a single and consolidated invoice monthly using post payment according to passenger usage.

DATA-DRIVEN DECISIONS

Use passenger usage data to guide transit agencies and governments in better understanding mobility patterns by cross-referencing and visualizing data to improve the overall mobility. This data can be used to optimize service offers and levels.

SEAMLESS INTERMODAL OPTIONS

In Toronto, we worked with Metrolinx and 19 surrounding agencies to create Triplinx, an intermodal real-time regional transit traveler information system.

PAPERLESS POST-PAYMENT ACROSS MODES

In Mulhouse, France, we gathered 9 public and private partners to deploy a collaborative paperless ticketing and post-payment system at a multimodal scale. Users pay for their travel in a single optimized charge at the end of the month.

REAL-TIME AND PREDICTIVE DATA TO EMPOWER PASSENGER MOBILITY

In Paris, the M2i project allows us to leverage scheduled, real-time and predictive mobility data from multiple agencies and mobility operators to enhance user options in time for the Paris 2024 Olympics.
